

Photo Monitoring

Purpose: To describe the methods and protocols that will be used to carry out visual monitoring and site inspections, including:

- annual monitoring
- wet-weather readiness inspections
- management practice monitoring and evaluation.

Monitoring is conducted to document that sediment control practices outlined in the LandSmart® Plan are implemented, that the practices are effective, and that they are properly maintained. Monitoring requirements specific for WDR compliance are included in Appendix D2.

	Indicate area type (Stalls, pasture, manure management, etc).	Date Photo Taken	Condition (performing properly, needs maintenance, needs consultation)	Actions Taken
